

WinJumble

WinJumble

WinJumble version 1.8 is an anagram finder and word unscrambler.

WinJumble is Copyright © 2005, 2017 by Ron Charlton. WJSetup.exe may be distributed per its freeware [license](#).

What WinJumble Does

WinJumble accepts two through thirty-one letters and finds all English words that can be made from them. WinJumble can help you:

- Find word anagrams (try *senator* and see what word follows it in the list)
- Unscramble jumbled words (try *aeiouqs*)

"...all English words..." above is a slight exaggeration. WinJumble knows about 376,000 English words. For comparison, the average speaker uses about 500 words, the average writer uses about 5,000 words, the average reader knows about 50,000 words, and English has a total of about 500,000 words.

The longest word WinJumble knows contains the letters *accddeeehhhiilllnnoooopratty*. Try them in WinJumble to see the longest word it knows.

Using WinJumble

To start WinJumble, click Start»Programs»WinJumble»WinJumble. This assumes you accepted the default installation setup.

Type between two and thirty-one (inclusive) letters in the text box. Click the **Jumble** button, or press the **Enter** key, or press the **Alt+J** keys.

A list of words made from your entry will appear in the list box. The list box will be empty if no word is found.

WinJumble has four buttons:

- **Help** - show this help
- **About** - show version, author and copyright information
- **Jumble** - make words from the letters you typed
- **Exit** - close (end) WinJumble

WinJumble has no menu.

Uninstalling WinJumble

You may uninstall WinJumble by using the *You can Uninstall WinJumble* item in the WinJumble program group (Start»Programs»WinJumble»You Can Uninstall WinJumble). Or you may use **Add or Remove Programs** in the Windows® Control Panel.
